Jusco VIR-100/200/300

Multi-purpose FT-IR / Fourier Transform Infrared Spectrometers

The VIR series FT-IR spectrometers are designed with flexibility in mind, providing various configurations for the laboratory, the field and customized applications. The most suitable system can be configured by selecting specific accessories matched to the desired applications, additional accessories added as needs change. The unique MultiChamberIR attachment allows a user to select among three measurement modes from transmittance, ATR and DRIFTS in one attachment. Such multi-measurement modes in one attachment are best suited to incoming inspection of a wide variety of samples ranging from solids to powders to liquids for qualitative and quantitative applications.

For even greater flexibility, external connection optics allows the user to install up to three different attachments in one system, selecting the most appropriate application accessory by simply switching the PC controlled optical configuration. A further extension of application capabilities can be achieved by integrating the universal optical base to configure a freely customized configuration by simply placing optimized optical components and sample holders onto the base. Thus even a large sample or an attachment which cannot fit in a standard sample compartment can now be utilized without compromise.

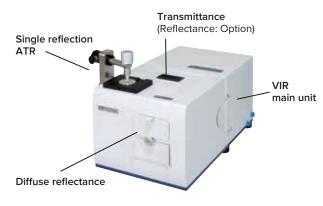

Features

- Three models available: VIR-100, 200 and 300.
- Simple and easy-to-use operations by combination of a variety of attachments and measurement/analysis programs
- Parallel configuration of up to three attachments in one system by utilizing the External connection optics
- Universal optical base allowing users to build customized systems
- Eco-friendly system including sleep-mode as well as a compact & space-saving design
- High-speed monitoring using the optional 40 Hz rapid scan
- Highly reliable data acquisition based on self-diagnostics & validation functions

Combination with MultiChamblR attachment

Up to three measurement modes in one attachment

Eiber interface unit

(applicable to process monitoring)

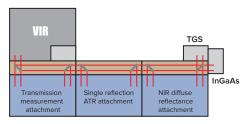

NIR Specular reflectance measurement unit (applicable to non-destructive measurement of tablets or samples in glass)

A wide variety of measurement attachments

| Selection of accessories | Name of attachment | Main application / feature | |
|---|-------------------------------------|---|--|
| A wide variety of measurement attachments are available. Furthermore, the Universal optical base allows a user to configure freely customized optics by simply putting mirrors and sample holders onto the bench. | SmartTech attachment | Qualitative measurement of powder and solid samples | |
| | Fiber interface attachment | Process monitoring | |
| | Long path gas cell attachment | Quantification of gas/vapor samples | |
| | Single reflectance ATR attachment | Analysis of powder, solid and liquid samples | |
| | NIR Specular reflectance attachment | Non-destructive measurement of coatings and reflective samples | |
| | IRT-1000 micro IR attachment | Micro-samples and contaminants | |
| | Autosampler attachment | High throughput analysis of drugs, etc. | |
| | Transmission measurement attachment | Qualitative / quantitative analysis of film samples | |
| * Newly developed External connection optics enables the parallel configuration of up to three attachments in one system. | MultiChambIR attachment | Three measurement modes (Transmittance/reflectance, diffuse reflectance and ATR) in one attachment | |

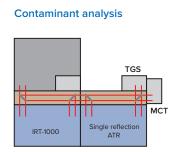

System configuration examples

External connection optics

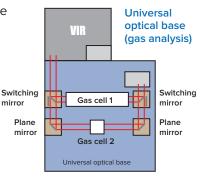

Qualitative, surface and quantitative analysis can be carried out in one system.

- according to specified purpose

A wide range of sample sizes from centimeters down to microns can be easily analyzed.

A wide range of gas concentrations can be applied by attaching gas cells with several different pathlengths.
