Biotage® 1-Point Support™

The Answer to All Your Questions
Customer Support and Resources

**Method Development and Troubleshooting Advice**

Biotage is ready to assist you with our team of analytical chemists who have many years of experience in providing practical, theoretical and technical knowledge relating to sample preparation techniques.

If you need help choosing the best sample preparation method for your application, or want to solve an existing sample preparation problem, please contact your local Biotage 1-Point Support™ team who will ensure you receive fast advice from our sample preparation experts.

**Technical Information**

Throughout this catalog, we highlight chemistry data sheets and application notes that provide detailed information on sample preparation techniques and SPE sorbents.

**Literature Library**

Biotage's literature library is a vital resource for analytical chemists looking to optimize sample preparation procedures. As sample preparation experts, Biotage are dedicated to finding the ideal solution to your sample preparation requirements with a regularly updated library containing application notes, technical notes and scientific presentations. The Biotage literature library has been optimized to provide the most appropriate, efficient and effective sample preparation solutions, taking into consideration matrix effects, analyte structure/functionality and relevant regulatory requirements.

The Biotage literature library is fully searchable by keyword, analyte, matrix, analytical technique, format, product type and industry type. This search feature allows you to obtain relevant application notes suitable for your needs in an efficient and dynamic manner. Visit the Biotage literature library [www.biotage.com/applications](http://www.biotage.com/applications).

**ISOLUTE® SLE+ User Guide**

Find out how to develop simple load-wait-elute extraction methods, and get the best results from ISOLUTE® SLE+ supported liquid extraction products. Literature part number UI304.

**EVOLUTE® EXPRESS User Guide**

Learn how to optimize methods, and speed up your SPE by eliminating conditioning and equilibration steps using EVOLUTE® EXPRESS columns and 96-well plates. Literature part number UI330.

**QuickStart Guide to SPE**

See our QuickStart Guide for a comprehensive introduction to solid phase extraction. Literature part number UI331.

**Avoiding Cross Talk in 96-well Sample Preparation**

Use simple practical strategies, hints and tips to mitigate or avoid cross-well contamination or 'cross talk' in high throughput 96-well based sample preparation. Literature part number PPS387.

To download a copy of any of the above guides please visit [www.biotage.com](http://www.biotage.com).

Biotage is committed to developing and manufacturing sample preparation products of the highest quality. State-of-the-art manufacturing techniques are supported by a comprehensive quality control (QC) testing program documented under our ISO9001:2008 registered Quality Management System.

All the components used to make our sample preparation products (tubes, frits, 96-well plates and sorbents) are rigorously cleaned and QC tested to ensure they meet our demanding purity specifications.

We use sophisticated instrumental techniques to confirm the physical and chemical nature of every batch of sorbent – ensuring reproducible performance in your application.

Every ISOLUTE® or EVOLUTE® EXPRESS product is accompanied by a detailed quality assurance (QA) report for your reference. This page explains the importance of the information it contains, and the impact this has on every sample preparation procedure you perform.

Reproducible sorbent mass packed into SPE columns:
- Column capacity and analyte elution volume requirements are constant
- Consistent column-to-column and batch-to-batch recoveries

Well controlled particle size distribution with minimal fines from column-to-column and batch-to-batch:
- Reliable sample processing using manifolds and automated devices
- Consistent flow through columns, from column-to-column and batch-to-batch
- Low back pressure – automation friendly
- Gravity loading of samples with some column configurations
- No fines in final extract to plug injectors or absorb analytes when sample is reconstituted in another solvent
- No channeling in sorbent beds minimizes sorbent mass requirements, reducing elution volumes and costs
- Minimal drying time, reproducible from batch-to-batch
- Large sorbent mass columns with good flow characteristics

Reproducible, optimized chemistry for ISOLUTE® and EVOLUTE® EXPRESS sorbents:
- Minimize method development time
- Eliminate need for time-consuming method changes when different batches of sorbent are used

High and reproducible capacities of ISOLUTE® and EVOLUTE® EXPRESS ion exchange sorbents:
- Reproducible high recoveries in ion exchange SPE without using columns with excessively large sorbent mass
- Saves time, money and increases analyte concentration in final extract

High purity sorbents, frits, columns and 96-Well plates:
- The purity of all the components used to manufacture ISOLUTE® and EVOLUTE® EXPRESS products are monitored to ensure compatibility with the most demanding applications
Sample Preparation Format Options
Sample Preparation Format Options

Actual Size Columns

All the SPE column and reservoir size options are illustrated here as actual size drawings.

The last character of the ISOLUTE® or EVOLUTE® EXPRESS SPE column or empty reservoir part number identifies the column reservoir size. For example, the 100 mg C18 ISOLUTE® column, P/N 220-0010-A uses column A, whereas the 100 mg C18 ISOLUTE-XL SPE column P/N 220-0010-G contains the same sorbent and sorbent mass packed in column G. The nominal volume listed for each reservoir is for the reservoir without sorbent.

Tableless columns (1, 3 and 6 mL) for use on Biotage® PRESSURE+ and Biotage® Extrahera® systems are also available.
Actual Size 48- and 96-Well Plate

As with individual columns, the last character(s) of the part number identifies the format/column type. The suffix for 96-well plates is –P01; 48-well plates is –Q01.

Actual size diagrams of the 96-well and 48-well fixed well plates are shown below. To prevent cross talk when processing plates, well outlets should penetrate the collection plate correctly.

Side elevation (actual size) 96-well plate (top) and 48-well plate (bottom).
ISOLUTE® SLE+ Supported Liquid Extraction Products

Simple Load-Wait-Elute Methodology
**ISOLUTE® SLE+**

**Supported Liquid Extraction Columns and Plates**

ISOLUTE® SLE+ Supported Liquid Extraction products are designed to provide stress free extraction of analytes from biological fluids, using a simple **Load-Wait-Elute** methodology.

The supported liquid extraction (SLE) process is analogous to traditional liquid-liquid extraction (LLE) and utilizes the same water immiscible solvent systems for analyte extraction. Instead of shaking the two immiscible phases together, in SLE, the aqueous sample is immobilized on an inert support, and the organic phase flows through the support, eliminating problems such as emulsion formation and low analyte recoveries.

Methods with high analyte recoveries, and clean, protein and phospholipid free extracts, are easy to develop and automation is simple.

Select the correct ISOLUTE SLE+ product based on the volume of sample to be extracted (see Table 1). Extraction solvent volumes are also listed.

### Table 1.
Recommended sample and elution volumes for ISOLUTE® SLE+ products.

Biotage are constantly developing new applications on ISOLUTE SLE+ products. Visit [www.biotage.com](http://www.biotage.com) for the latest information.
ISOLUTE® PLD+
Protein and Phospholipid
Removal Products

Simple, Effective Sample Clean up for LC-MS/MS
ISOLUTE® PLD+
Effortlessly Improve Analyte Sensitivity

ISOLUTE® PLD+
Protein and Phospholipid Removal Columns and Plates

ISOLUTE® PLD+ Protein and Phospholipid Removal products provide a very effective but extremely simple sample clean up for blood based samples prior to LC-MS/MS analysis. Requiring next to no method development, ISOLUTE PLD+ can be integrated quickly and easily into routine workflow, increasing productivity and reducing instrument downtime. ISOLUTE PLD+ products remove >99 % of plasma proteins and phospholipids, the main causes of ion suppression, leading to cleaner extracts and increased sensitivity (signal-to-noise (S/N)) for a broad range of analytes.

Using a simple solvent crash/filtration based procedure, proteins and phospholipids are simultaneously removed from plasma and other blood based samples while high, reproducible analyte recoveries are maintained. The optimized frit arrangement acts as a depth filter, efficiently trapping precipitated proteins, without blocking or plugging.

ISOLUTE PLD+ plates and columns can be processed using positive pressure, vacuum processing or automated sample processing systems – see page 61 for Manual Sample Processing Products and page 67 for Automated Sample Processing Products.

Typical ISOLUTE® PLD+ procedure.

EVOLUTE® EXPRESS
SPE Products

Load-Wash-Elute SPE Products
**EVOLUTE® EXPRESS**

**Load-Wash-Elute SPE Columns and Plates**

EVOLUTE® EXPRESS represents a leap forward in high throughput solid phase extraction. The EVOLUTE EXPRESS range of SPE columns and 96-well plates combine powerful EVOLUTE sorbent chemistry with innovative features that enhance productivity. With improved flow-through characteristics and by eliminating the need for conditioning and equilibration, sample preparation time can be cut by more than 1/3 using the simplified Load-Wash-Elute procedure.

---

**Fast and Efficient Flow Rates**

EVOLUTE® EXPRESS products dramatically improve flow characteristics and enhance sample preparation productivity. Flow rates are fast and consistent even when loading aqueous biological fluid sample directly onto a dry column.

---

**EVOLUTE® EXPRESS WCX**

» For extraction of strongly basic analytes

**EVOLUTE® EXPRESS AX**

» For extraction of acidic analytes

**EVOLUTE® EXPRESS WAX**

» For extraction of strongly acidic analytes

---

**Figure 1.** 10 mg/1 mL EVOLUTE® EXPRESS vs. competitor 10 mg/1 mL equivalent. N=12 for each product. Columns processed using the Biotage® PRESSURE+ instrument. Columns processed at 1 psi unless otherwise stated. Sample was pooled human urine diluted 1:3 with water.

Due to the difficulty in measuring times for each individual column, figures for the time to complete flow for the slowest flowing column are shown. For example for 10 mg EVOLUTE EXPRESS ABN load-wash-elute method, all samples loaded in less than 15 s, whereas for the competitor product, sample loading on all columns was complete after 210 s, and increased pressure (up to 5 psi) was required to load the total volume.
**Flexible Format for Cost Efficiency**

EVOLUTE® EXPRESS columns are supplied as standard in the tableless (or flangeless) format. Up to 96 of the 1 mL format columns can populate a base plate for processing using the Biotage® Extrahera™, PRESSURE+ or vacuum manifold, as a cost effective, modular alternative to a 96-well plate.

**EVOLUTE® EXPRESS Sorbent Selection Plate**

The EVOLUTE® EXPRESS Sorbent Selection plate contains the four mixed-mode EVOLUTE sorbents CX, WCX, AX and WAX on one plate.

Biotage are constantly developing new applications on EVOLUTE® EXPRESS products. Visit [www.biotage.com](http://www.biotage.com) for the latest information.
**EVOLUTE® EXPRESS ABN**

Chemical structure of EVOLUTE® EXPRESS ABN

**Chemical Description:**
Water wettable polystyrene-divinylbenzene incorporating non-ionizable hydroxyl groups.

- Average particle size: 30 µm, 50 µm
- Pore diameter: 40 Å
- Sorbent Type: Wettable non-polar sorbent with no secondary interactions

**Application:** EVOLUTE® ABN can be used to extract a diverse range of acidic, neutral and basic analytes from biological fluids and other aqueous matrices. Performance is not adversely affected by drying the sorbent.

**EVOLUTE® EXPRESS CX**

Chemical structure of EVOLUTE® EXPRESS CX

**Chemical Description:**
Sulfonic acid modified polystyrene-divinylbenzene incorporating non-ionizable hydroxyl groups.

- Average particle size: 30 µm, 50 µm
- Pore diameter: 40 Å
- Sorbent Type: Mixed-mode non-polar/strong cation exchange
- Exchange capacity: 0.5 mmol/g

**Application:** EVOLUTE® CX can be used to extract basic analytes from biological fluids and other aqueous matrices. Performance is not adversely affected by drying the sorbent.

**EVOLUTE® EXPRESS AX**

**Chemical Description:**
Quaternary amine modified polystyrene-divinylbenzene incorporating non-ionizable hydroxyl groups.

- Average particle size: 30 µm, 50 µm
- Pore diameter: 40 Å
- Sorbent Type: Mixed-mode non-polar/strong anion exchange
- Exchange capacity: 0.4 mmol/g

**Application:** EVOLUTE® AX can be used to extract acidic analytes from biological fluids and other aqueous matrices. Performance is not adversely affected by drying the sorbent.

**EVOLUTE® EXPRESS WCX**

**Chemical Description:**
Carboxylic acid modified polystyrene-divinylbenzene incorporating non-ionizable hydroxyl groups.

- Average particle size: 30 µm, 50 µm
- Pore diameter: 40 Å
- Sorbent Type: Mixed-mode non-polar/weak cation exchange (pKa~5)
- Exchange capacity: 0.4 mmol/g

**Application:** EVOLUTE® WCX can be used to extract strongly basic analytes (e.g. quaternary amines) from biological fluids and other aqueous matrices. Performance is not adversely affected by drying the sorbent.

**Application:** Extraction from aqueous matrix using both non-polar interactions (for acidic, neutral and basic compounds) and readily accessible secondary silanol or ionic interactions (for basic compounds only). Not the ideal choice when working at extreme pH, C18 is the preferred option for these methods.

- Pore diameter: 60 Å
- Sorbent Type: Non-Polar

**Application:** Extraction from aqueous matrix using non-polar interactions (for acidic, neutral and basic compounds). Secondary silanol or ionic interactions can be used to enhance extract purity and method robustness for basic compounds.

### ISOLUTE® C2

**Chemical structure of C2 silane covalently bonded to the surface of a silica particle**

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Non-Polar

**Application:** Most commonly used C2 sorbent for the extraction of acidic, neutral, and basic compounds from aqueous matrices. Secondary silanol or ionic interactions can be used to enhance extract purity and method robustness for basic compounds.

### ISOLUTE® C2(EC)

**Chemical structure of C2 silane and trimethyl silyl group covalently bonded to the surface of a silica particle**

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Non-Polar

**Application:** Extraction from aqueous matrix using non-polar interactions (for acidic, neutral, and basic compounds).

[Images of ISOLUTE® C2 and C2(EC) products]
ISOLUTE® PH

Chemical structure of phenyl silane covalently bonded to the surface of a silica particle

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Non-Polar

**Application:** Extraction from aqueous matrix using both non-polar interactions (for acidic, neutral and basic compounds) and secondary silanol or ionic interactions (for basic compounds only). This sorbent exhibits a different selectivity compared with C18 and C8 phases when both aromatic and non-aromatic compounds are being extracted.

ISOLUTE® CN

Chemical structure of cyanopropyl silane covalently bonded to the surface of a silica particle

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Non-Polar

**Application:** Extraction from aqueous matrix using both non-polar interactions (for acidic, neutral and basic compounds) and secondary silanol or ionic interactions (for basic compounds only). Can also be used in polar SPE mode.

ISOLUTE® HCX

**ISOLUTE® HCX combines** C8 (Octyl) and sulfonic acid functionalities

- **Average particle size**: 50 µm
- **Pore diameter**: 60 Å
- **Sorbent Type**: Mixed-Mode

**Application**: The first choice sorbent for extracting drugs of abuse from biological fluid samples.

---

ISOLUTE® HCX-3

**ISOLUTE® HCX-3 combines** C8 (Octadecyl) and sulfonic acid functionalities

- **Average particle size**: 50 µm
- **Pore diameter**: 60 Å
- **Sorbent Type**: Mixed-Mode

**Application**: Extraction of basic analytes from aqueous matrix using dual non-polar and strong cation exchange interactions. A good alternative to HCX for basic compounds that require more retentive non-polar character from the mixed-mode sorbent.

Also available in bulk sorbent, see page 46.

**Support Documents for ISOLUTE® HCX-3**

- **TN116**: Generic Method for the Extraction of Basic Drugs from Biological Fluids using ISOLUTE® Mixed-mode SPE Columns and 96-well Plates
**ISOLUTE® HCX-5**

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Mixed-Mode

**Application:** HCX-5 provides the cleanest extract of all the mixed-mode sorbents. Ideal choice where the basic analyte to be extracted has sufficient non-polar character to be well retained by the C4 non-polar component of the mixed-mode sorbent.

**Support Documents for ISOLUTE® Multimode**

- IST1022: Extraction of Aflatoxins from Cereals
- IST1076: Extraction of Acrylamide from Cooked Foodstuffs
**ISOLUTE® NH2**

Chemical structure of NH2 aminopropyl silane covalently bonded to the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Weak anion exchange (pKa 9.8) or polar
Exchange capacity 0.6 meq/g

**Application:** Extraction of strong acids and polyacidic compounds from aqueous sample matrix. Analyte elution can be performed by neutralizing charge on the sorbent. Sorbent supplied as the free base.

Alternatively, ISOLUTE® NH2 can be used for extraction of polar compounds from a non-polar matrix using hydrogen bonding retention mechanism. Less retentive than SI.

**ISOLUTE® PSA**

Chemical structure of PSA ethylenediamine-n-propyl silane covalently bonded to the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Weak anion exchange (pKa 10.1 and 10.9) or polar
Exchange capacity 0.4 meq/g

**Application:** ISOLUTE® PSA can be used to extract strong acids and polyacidic compound from aqueous sample matrix. Analyte elution can be achieved by neutralizing the charge on the sorbent. Sorbent will complex with certain metal ions. Supplied as free base.

Alternatively, ISOLUTE® PSA can be used for extraction of polar compounds from a non-polar matrix using a hydrogen bonding retention mechanism. Less retentive than silica when used in this mode.

ISOLUTE® SAX

Chemical structure of SAX quaternary amine silane covalently bonded to the surface of a silica particle

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Strong anion exchange
- Exchange capacity: 0.6 meq/g

Application: Extraction of acidic analytes from aqueous sample matrix. Supplied with chloride counter ion.

ISOLUTE PE-AX

Chemical structure of PE-AX quaternary amine silane covalently bonded to the surface of a silica particle

- Average particle size: 50 µm
- Pore diameter: 60 Å
- Sorbent Type: Strong anion exchange
- Exchange capacity: 0.6 meq/g

Application: Extraction of acidic analytes from aqueous sample matrix. Supplied with acetate counter ion for more efficient extraction of acidic analytes including those with polar/water soluble characteristics.

ISOLUTE® CBA

Chemical structure of CBA silane covalently bonded to the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Weak cation exchange (pKₐ 4.8) or polar
Exchange capacity 0.6 meq/g

Application: Extraction of strong bases and polybasic compounds from aqueous sample matrix. Analyte elution can be performed by neutralizing charge on the sorbent.

ISOLUTE® SCX

Chemical structure of benzenesulfonic acid functional group covalently bonded to the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Strong cation exchange
Exchange capacity 0.4 meq/g

Application: Extraction of basic analytes from aqueous or partially aqueous sample matrix. Supplied in the protonated form.

**ISOLUTE® SCX-2**

Chemical structure of propylsulfonic acid functional group covalently bonded to the surface of a silica particle

Average particle size 50 µm  
Pore diameter 60 Å  
Sorbent Type Strong cation exchange  
Exchange capacity 0.6 meq/g

**Application:** Extraction of basic analytes from aqueous or partially aqueous sample matrix. Supplied in the protonated form. Sorbent of choice if strong cation exchange is primary retention mechanism, or, if aqueous conditions required for analyte elution. For methods listing PRS as the SPE sorbent, SCX-2 is a direct replacement.

ISOLUTE® SI

Chemical structure of silanol groups on the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Polar
Nominal moisture content 7%

Application: Extraction of polar compounds from a non-polar sample matrix using hydrogen bonding retention mechanism.

ISOLUTE® DIOL

Chemical structure of DIOL silane covalently bonded to the surface of a silica particle

Average particle size 50 µm
Pore diameter 60 Å
Sorbent Type Polar

Application: Extraction of polar compounds from a non-polar sample matrix using hydrogen bonding retention mechanism. Less retentive sorbent than SI. Can also be used as a non-polar sorbent with aqueous sample matrices.

**ISOLUTE**® FL

- Average particle size: 150–250 µm
- Pore diameter: 60 Å
- Nominal moisture content: <2%
- Surface pH: 8
- Sorbent Type: Polar

**Application:** Extraction of polar compounds from a non-polar sample matrix. Alternative to silica based polar sorbents. Minimal retention of basic compounds. Activated for separation of chlorinated pesticides.

- IST1080 Multi-residue Extraction and Clean up of Pesticides from Fruits and Vegetables

---

**ISOLUTE**® Alumina

High activity, 50–200 µm particle size range alumina, available in acidic, neutral and basic surface pH options. The surface of the alumina can absorb molecules by interaction with the aluminum metal center, hydrogen bonding with surface hydroxyl groups, or by ion exchange if the surface carries a charge. The extent of these different interactions can be enhanced by control of the surface pH by treatment with acidic, basic or neutral solutions.

**ISOLUTE AL-A**

Acid washing results in a surface with decreased capacity for basic compounds. Compounds are retained by ion exchange with the positively charged surface or by specific interactions with the metal center. ISOLUTE® AL-A has a nominal moisture content of <0.1% (Brockman Activity I/Super 1 grade), and surface pH of 4.5.

**ISOLUTE AL-N**

Neutral surface allows interactions of the aluminum metal center with compounds whose heteroatoms are electronegative (e.g. N, O, P & S) or whose highly aromatic structure makes them “electron rich”. The adsorbent can be useful for retaining amines and aromatic compounds from either aqueous or non-aqueous solvents. ISOLUTE® AL-N has a nominal moisture content of <0.1% (Brockman Activity I/Super 1 grade), and surface pH of 7.5. Also available in bulk sorbent, see page 46.

**ISOLUTE AL-B**

Washing this material with a basic solution results in a net negative charge. Cationic compounds are retained on the negatively charged surface or by specific interactions with the metal center. ISOLUTE® AL-B has a nominal moisture content of <0.1% (Brockman Activity I/Super 1 grade), and surface pH of 10.

### ISOLUTE® EPH SPE Columns

Fractionate extractable petroleum hydrocarbons in soil extracts prior to GC analysis. ISOLUTE® EPH columns are optimized to ensure no breakthrough of lower MW aromatic hydrocarbons (PAHs) in the aliphatic fraction. Application notes with methodology optimized for automated SPE processing are available. See technical note TN142 for more information and download application note AN703 (ASPEC) or AN704 (RapidTrace) for automated methods.

### ISOLUTE® PAH SPE Columns

Extract PAHs from water samples containing polar interferences such as humic acids. The layered column removes humic acids from the final extract, so that they cannot interfere in the final analysis. Download application note IST1025A for more information.

<table>

ISOLUTE® Myco SPE Columns

Solid Phase Extraction Columns for Mycotoxin Analysis
ISOLUTE® Myco SPE columns offer simple and efficient multiple mycotoxin sample preparation from a wide range of matrices, ideally suited for selective and fast LC-MS/MS analysis. ISOLUTE Myco SPE columns contain a novel polymer-based sorbent designed specifically to be selective enough to isolate a wide variety of different mycotoxins.

ISOLUTE Myco SPE columns are available in tabless (flangeless) format for use on both manual and automated sample processing manifolds and systems.

» Matrix specific application notes: Each method confidently meets the maximum residue limits (MRL) set down by EU and US regulations in terms of detection limits, %RSD and recoveries, in most cases far exceeding these requirements.

» ISOLUTE Myco clean up methods are quick, simple to use and require no offline steps; making the technique suitable for automation, especially useful for high throughput testing laboratories.

» Unlike immunoaffinity columns, ISOLUTE Myco columns are cost effective, easy to use and have no special storage requirements.

Matrix Specific Application Notes

» AN781 Extraction of Patulin from clear Apple Juice Using ISOLUTE® Myco prior to LC-MS/MS Analysis

» AN782 Extraction of Multiple Mycotoxins From Grain Using ISOLUTE® Myco prior to LC-MS/MS Analysis

» AN783 Extraction of Deoxynivalenol From Grain Using ISOLUTE® Myco prior to LC-MS/MS Analysis

» AN784 Extraction of Multiple Mycotoxins From Nuts Using ISOLUTE® Myco prior to LC-MS/MS Analysis

» AN785 Extraction of Aflatoxins and Ochratoxin from Dried Chili Using ISOLUTE® Myco prior to LC-MS/MS Analysis

» AN804 Extraction of Multiple Mycotoxins From Animal Feed Using ISOLUTE® Myco SPE Columns prior to LC-MS/MS Analysis

» AN807 Extraction of Aflatoxin M1 From Infant Formula Using ISOLUTE® Myco SPE Columns prior to LC-MS/MS Analysis

» AN823 Extraction of Multiple Mycotoxins From Cereal Based Infant Food Using ISOLUTE® Myco prior to UHPLC MS/MS/MS Analysis

*Tabless columns for use with PRESSURE+ Positive Pressure Manifolds and other automated SPE systems. Other tabless columns are available, contact Biotage for details.
ISOLUTE® Bulk Sorbents
The same high quality sorbents used to manufacture ISOLUTE® SPE columns and 96-well plates are also available in bulk. The tightly controlled physical and chemical properties of these sorbents which provide reproducible performance in SPE procedures also ensure their suitability when used in applications that require loose material.

**Non-Polar Sorbents**

ISOLUTE HM-N, a modified form of diatomaceous earth, is also available in bulk. The material is used for applications requiring an inert support as part of the sample preparation process (e.g. SFE). For details of pre-packed columns containing ISOLUTE HM-N, see page 40.
On-line SPE Cartridges
For Integrated Sample Preparation and Analysis
The on-line approach to sample preparation has grown in popularity because of its advantages in improved workflow and reduced sample handling.

» Little or no sample pre-treatment
» Totally automated procedures
» High precision and accuracy
» Elimination of blow down and reconstitution steps
» Reduced solvent use and disposal costs

Trace analysis of organics in water traditionally involves large sample volumes, labor intensive procedures and relatively high use of solvents. The on-line SPE approach uses a simple, well established hardware setup, and fully integrates sample preparation into the analytical workflow. Typical sample volumes of 1–10 mL, and lower solvent usage mean sample collection, transport and handling, along with solvent disposal costs, are much reduced.

Biotage on-line SPE columns consist of high purity, low dead volume stainless steel components for use in SPE-LC-MS/MS applications, and are packed with high performance ISOLUTE® ENV+ and EVOLUTE® EXPRESS ABN sorbents.

ISOLUTE® QuEChERS

Fast and Efficient Clean up of Complex Food Samples
ISOLUTE® QuEChERS

ISOLUTE® QuEChERS (Quick, Easy, Cheap, Effective, Rugged and Safe) products provide simple clean up of complex samples using salt assisted extraction and partitioning, followed by dispersive SPE. The pre-weighed extraction and clean up tubes conform to AOAC and EN methodologies, and include options for waxed and highly pigmented fruit and vegetable samples.

AFFINILUTE™ MIP

Molecularly Imprinted Polymers
AFFINILUTE™ MIP

Biotage AFFINILUTE™ MIP products offer analytical chemists ultimate selectivity compared with standard solid phase extraction techniques. Unlike other methods, AFFINILUTE MIP products rely on the specific molecular structure of the analyte for targeted capture resulting in exceptional clean up. AFFINILUTE MIP columns combine high affinity with standard flow through sample preparation methodology.

**Mechanism of MIP formation.** Unlike most separation particles that exhibit only non-selective interactions, MIP particles have a selective synthetic recognition site (or imprint), which is sterically and chemically complementary to a particular analyte or class of analytes. The interactions mimic antibody or receptor binding and are stronger than interactions obtained with conventional separation materials.

Manual Sample Processing Products and Accessories
Biotage® PRESSURE+ 48 and PRESSURE+ 96
Positive Pressure Manifolds

Biotage® PRESSURE+ 48 and PRESSURE+ 96

Biotage® PRESSURE+ manifolds deliver positive pressure, parallel processing for 96 well plates, 1 mL, 3 mL and 6 mL column formats. The systems utilize a consistent, uniform flow of positive pressure to move both low and high viscosity liquids through SPE plates and columns.

### Biotage® PRESSURE+ 96

Automated Sample Processing Products
**Biotage® Extrahera™**

Biotage® Extrahera™ is a compact eight channel automation instrument, designed for speed, flexibility and with end user operation in mind. The system has been designed to automatically process methods using well plate or column consumables. Ideal for processing Supported Liquid Extraction (SLE), Solid Phase Extraction (SPE), Phospholipid Depletion (PLD) and Protein Precipitation (PPT) based methods. The system benefits from a compact two level layout for solvent and sample pipette tips, extraction consumables and samples. The lower level features an innovative carousel based design. Switching between processing either well plates or columns can be achieved in less than five minutes. The system processes a full standard SPE plate method in less than 30 minutes including sample pre-treatment, conditioning, equilibration, load, wash and elution steps – even when using volatile and low surface tension solvents.

» Fully automated sample processing station
» Supports 96 & 48 fixed well plates and 96 tableless 1 mL columns or 1, 3 and 6 mL industry standard columns
» Features five automatically pump fed solvent reservoirs
» Built in controller with 12” touch screen graphical user interface
» Simple & intuitive method creation
» Compact footprint
» Built in fume-hood capabilities suitable for bench top usage
» Positive pressure processing for accurate control of flow
» Specified 50 to 1000 µL liquid handling performance
» Aspirate/dispose mixing
» Ultrasonic sensing
» Three elution positions for fraction collection and multiple elution

RapidTrace®+
Automated High Throughput Solid Phase Extraction

Closed fluid path system with segregated waste lines maintain integrity of sample.

Reagent mixing chamber allows automated online reagent blending in the method.

Positive pressure, stepper motor syringe pump delivers precise flow rates.

Magnetically encoded racks of routine samples.

Compatible 1, 3 and 6 mL version SPE columns.

Part Number | Description
--- | ---
C50000 | RapidTrace+ Workstation, 1 mL and 3 mL (10 Columns)
C125713 | RapidTrace+ Workstation, 6 mL (5 columns). 3 mL and 1 mL operation possible by purchasing appropriate plunger (see accessories brochure)
C52006 | RapidTrace Start-Up Kit with Software
C52689 | RapidTrace Notebook Controller

Part Number Description Qty.
--- | --- | ---
Racks (Each RapidTrace+ requires one rack) | | 
C50974 | 13 x 100 mm Sample Tube | 12 x 75 Fraction Tube | 1
C50976 | 13 x 100 mm Sample Tube | 12 x 75 Fraction Tube | 1
C58309 | 13 x 100 mm Sample Tube | 13 x 100 mm Fraction Tube | 1
C56786 | 16 x 100 mm Sample Tube | 16 x 100 mm Fraction Tube | 1
C56536 | 13 x 100 mm Sample Tube | 12 x 75 mm Fraction Tube (9 Position Chilled Rack) | 1
C133968 | 40 mL Sample Flask (5 position) | 16 x 100 Fraction Tube (10 position) | 1

### Biotage® ACT Plate Adapter

Protect your samples from cross contamination (cross talk) during evaporation. Designed for use with square well collection plates, Biotage® ACT (Anti Cross Talk) Plate Adapter is compatible with Biotage® SPE Dry 96 and SPE Dry 96 Dual Sample Concentrator Systems.

- **Part Number** | **Description**                                                                 | **Qty.**
- 414355SP      | Biotage® ACT Plate Adapter                                                      | 1    |
- 121-5202      | Collection Plate, 1 mL, Square                                                  | 50   |
- 121-5203      | Collection Plate, 2 mL, Square                                                  | 50   |

### Avoiding Cross Talk Brochure

For further information download the Avoiding Cross Talk brochure from [www.biotage.com](http://www.biotage.com). Literature part number PPS387.
The new TurboVap® is a second generation product which builds on the solid foundations of the existing TurboVap product line and incorporates many new features.

The system is based around an interchangeable design which allows users to switch between the functionality they are presently accustomed to in the old style TurboVap LV and II instruments. The TurboVap EH allows seamless use of Biotage® Extrahera™ collection racks in the new system.

The new TurboVap has many new and improved hardware features versus the old style units, notably enhanced visibility, removable and replaceable nozzles, on the fly nozzle adjustment, easily exchangeable manifolds to switch between LV, II and EH configurations, evaporation flow gradients, drain port and touch screen interface. To complement the TurboVap are a series of Multi Racks that allow end users much greater flexibility in the variety of different tube/vial sizes they can process from just one rack.

TurboVap® 96

The TurboVap® 96 Concentration Workstation is a high speed concentrator designed to work with 96-well microplates and deep-well plates. It is an efficient alternative to the constant monitoring and long evaporation times that are characteristic of conventional techniques—with the added bonus of unattended operation.

Limited Warranty

Biotage warrants that Biotage Consumables, including all FLASH®-, FLASH+®, ISOLUTE®, EVOLUTE® and Samplet® purification cartridges, scavenger resins, solid-bound reagents and microwave vials, will be of good quality and workmanship, and will meet the applicable product specification. This warranty applies only to the initial test performed at the Customer’s facility upon the initial start-up of the consumables and expires at the time the user applies an actual sample to the consumable. If the cartridge is packed with media provided by the Customer, the Biotage warranty applies only to the plastic tube, frits, and labor required for packing and testing the cartridge. Biotage will not be liable for any damage to media provided by the Customer that may be caused when Biotage packs such media in accordance with Biotage’s standard operating procedures.

Should any Biotage consumable fail to meet the limited warranty above after being tested in accordance with the applicable Biotage standard operating procedures, Biotage will provide, at its sole option, either a replacement cartridge or reaction vial. If a cartridge, it will be packed with the original media, or packed with new media, at no cost to the Purchaser. If such failed cartridge is packed with media provided by the Purchaser, Biotage will make a reasonable effort to re-pack the original media, or pack a replacement cartridge with new media provided by the Purchaser.

Returns of any Consumable must be authorized in advance. Please contact Biotage for a Return Authorization (RA) number and shipping instructions. All claims must be made within thirty (30) days of shipment from Biotage, or after the initial test of the cartridge at the Customer’s facility, whichever is first.

BIOTAGE MAKES NO OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING MERCHANTABILITY OR SUITABILITY FOR ANY PURPOSE.

BIOTAGE WILL NOT BE LIABLE IN ANY EVENT FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES WHETHER ARISING IN TORT, UNDER ANY WARRANTY OR OTHERWISE.
Your Complete Partner for Effective Chemistry

Biotage is a worldwide supplier of instruments and accessories designed to facilitate the work of laboratory chemists. With our deep knowledge of the industry, academic contacts and in-house R&D teams, we can deliver the best solutions to your challenges. We take great pride in our flexibility and ability to meet our customer’s individual needs. With strong foundations in both analytical and organic chemistry, we can offer the widest range of solutions available on the market.
